

SUPPORTED DEVICES

Accelerating device integration with a new release process

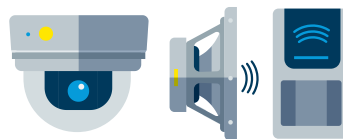

As of 2024, new devices and firmware will be continuously added to the Supported Devices List as they become available.

From every two months to every day

Previously, we added new devices and firmware updates to the Milestone Supported Devices List once every two months. Last year, we added approximately 200+ new devices and 300+ new firmware updates every second month.

As of 2024, new devices and firmware will be added to the Supported Device List as soon as they are self-tested by the partner and reviewed by Milestone — in other words, every day.

The benefits of adding devices continuously

This means faster time to market, more effective device licensing and helping avoid unnecessary delays. And it also makes it easier than ever to do business with Milestone.

Please note that the Device Pack Installer will continue to be released every two months with new features and bug fixes.
